

IIF SUPPORTED THE CASE OF FOUNDRIES PRODUCING CASTINGS FOR WIND TURBINE GENERATORS

- Anti Subsidy /Countervailing Duty (CVD) on Castings imported from China for wind Mill generators

IIF had supported the cause of foundries producing castings for WIND TURBINE GENERATORS (WTG) suffering on account of imports of castings for wind mills from China at subsidized rates. As a result the domestic industry suffered injury due to subsidization of these items.

The items i.e. castings for wind operated generators covered were having following HS Codes

8483 40 00

8503 00 10

8503 00 90

IIF in support of the foundries producing castings for WTG supported the representation to the Ministry of New & Renewable Energy & also with Ministry of Commerce & Industry in Aug 2015 for imposition of anti subsidy (CVD) on these items.

This has been considered favourably & anti subsidy (CVD) has been imposed on the imports of these items for 5 years.

This has now been notified by customs notification No 1/2016 dot 19-1-2016 & CVD has been imposed on imports of above items (ranging 8.78-13.44%) which will give substantial relief to domestic foundries producing these cast parts.
